DRAKE

DRAKE DRAKE DRAKE
NORTHWAVE NORTHWAVE

It's been 32 years since we've been around. Most of you have seen the ups and downs of snowboarding, just like us. We've seen it all: mountains of events, competitions, trips. There have been times it REALLY felt like we were in Vegas. Throughout all these years, with all these ups and downs, we've seen one consist aspect: development. No matter the era, we have always believed in making a product that would be better and new each year. This is because our love for snowboarding has never had an "up or down" period. It has always been present, persistent and reinvigorating. Our passion and drive has always been true. We've never thought about giving up. We are very proud to say that we have always been here, even throughout these ups and downs, like a relationship, a marriage. Like true love. When it's pure and true, it can't be given up on. We work on it and we keep making it stronger and better. And we ain't going anywhere.

DOMAIN 2SPIN
70220103

19 black / dark grey

This bad boy has been our rock for a long time now. A boot made to resist all types of impacts and tested by national team rider Nicholas Huber, its definitely what you want to stomp hard through big kickers due to its double crossbow vibram sole which easily absorbs impacts. Northwave's SPIN technology has been around for years but never before used quite like this. One spin system is allocated exclusively for the heel locker retention system which pulls the tongue of your boot snug on your ankle locking your foot in place. The second spin dial closes real nicely the front of the boot and if that wasn't enough, we added the power strap which will help you feel super rock solid. Let's not forget about the TF Pro liner which makes it really comfy for your feet to hang out in there all day long.

size: 240 / 305

- 2SPIN** **HEEL LOCKER**
- vibram® CROSS X BOW**
- TF PRO LINER**

"Spin" is a tried and tested technology from Northwave but never before has it been used quite like this. With one dial dedicated to the heel locker retention system and the second dial for closing the front of the boot.

The 'HEEL LOCKER' system offer slightly more ability for the user to achieve that locked in feeling, this is because the retention system works exclusively with the external tongue of the boot activated using the 'Spin' lacing.

The Double Crossbow system technology is further augmented in the Vibram version features 30% more grip on ice and slippery surfaces.

TF PRO liner has updated materials, with double density foam to ensure the perfect fit

DOMAIN SLS
70220203

91 dark brown

Our most sturdy boot the Northwave Domain is famous for being flown 120ft through the air or submerged in deep in creamy pow with the upmost ease and comfort. This year we added the Super Lace Single which has revolutionised overall fit along with ease of entry and exit, combined with the new Power Strap along the top of the boot we guarantee you'll be locked in and tight 'till your very last lap. The brand new heel retention system pulls the outer tongue of your boot in hard around your ankle as if your boots were giving your feet a French kiss, hence the name 'Heel Licker'. The existing biomap asymmetrical tongue, rubber shield protections and thermowelded finishings assure a long lasting and waterproof boot. Plus our tried and tested Double Crossbow outsole with Vibram insert and TF Pro Liner.

size: 240 / 305

- SLS** **HEEL LOCKER**
- vibram® CROSS X BOW**
- TF PRO LINER**

In the Super Lace Single, one lace is dedicated for tightening the top of the boot and another lace is dedicated to retaining the heel and tightening the base of the boot.

The Heel Licker system combined with SLS system assuring the best lock of your foot possible.

The Double Crossbow system technology is further augmented in the Vibram version features 30% more grip on ice and slippery surfaces.

TF PRO liner has updated materials, with double density foam to ensure the perfect fit

The Decade Hybrid is a real beauty. In its new colorway it will surely get some heads turning. It comes in all black or sand/black which is very much loved by our professional riders. This new edition is less stiff than the Domain but not as soft as the Edge. It's our team rider's first choice due to its extremely comfortable fit. We can find the SPIN system which is great to close the upper part of the boot. It also gives you the opportunity to boost through the pistes much faster since it's going to be super fast to get in and out of due to its closing system. The popcorn outsole is made to absorb all shocks while riding and therefore gives your heels more protection. This boot will protect you while riding pow and also rock the pistes comfortably.

POP CORN SOLE

This low profile outsole allowing you to practically feel the snow beneath your feet while the POP-CORN will protect your heels from heavy impacts when you decide to take flight. The HYPERGRIP tread is made from the same rubber as your car's winter tyres, perfect for cruising up icy streets and snowy peaks.

HYBRID

The hybrid system combines the "spin" and "SLS" together for a closure that is quick, affordable and reliable. The SLS cable will activate the heel locker retention system and then you can close the remainder of the boot using the spin system located on the tongue.

TF PRO liner has updated materials, with double density foam to ensure the perfect fit

DECADE SLS
70220403

NEW
43 green forest / black

Decade SLS: The Decade SLS comes in an all new style this year. With 30 years of snowboard boot development being poured into this model, we have no doubt that once your feet lace into these beautiful puppies they may never want to leave. The new colorway is as stylish as you can get. It's black, sand and forest green. Just like the Decade Hybrid, it's got the popcorn outsole which makes it real grippy in icy conditions. It's an all rounder boot and made to stand out in the PRO line of boots, hence why it's Simon Gruber's first choice.

size: 240 / 305

DECADE PRO
70220603

NEW
10 black

Decade PRO Ethan: When you've got someone like Ethan Morgan, you know that it's going to be a success. Ethan's second pro model boot has everything you ever wanted: style and durability. It's got similar tech to the Decade but with the introduction of laces. Old school is the new school sometimes. The boot is a plain canvas as it comes in white but with the opportunity to pimp it the way you want it. Inside you'll find some coloured pens to graffiti the hell out of this boot. If you don't fancy the colorway, we've also made it more subtle and you can choose it in black. Definitely our PRO team's choice. For this season also available in black.

size: 240 / 305

- LACE + SLS**

52 white / multicolor

EDGE HYBRID
70220602

68 black / sand

The Edge is our all mountain/freestyle boot. We really raised the bar this year giving it our new Hybrid SPIN system which really locks your heel in. You will be able to ride a quality boot for an affordable price. It's got a completely restyled upper shell and the colorway is as classy as it gets. These babies are up for grabs!

size: 240 / 315

SLS + SPIN

HEEL LICKER

STAMINA OUTSOLE **TF** LINER

The hybrid system combines the "spin" and "SLS" together for a closure that is quick, affordable and reliable.

The specific lace loop sequence combined with the double anchor points positioned low around the angle means tension produced while tightening the lower boot is prioritised to the Heel Licker system.

The all mountain/freestyle Stamina soles prised of an EVA RP compound that makes the material more elastic and responsive than traditional options. With two grip areas, the Stamina soles are lighter.

TF Liner features injected C in memory latex, exclusive tongue side-cut for a fluid and supportive flex.

EDGE SLS
70220702

NEW
10 black

Edge SLS: If you're looking for something that is affordable but at the same time reliable, the Edge SLS is a good choice. The difference between the Edge SLS and the Edge Hybrid is mainly the closing system. It really comes down to preference. So, in this boot we won't find the spin system but we can be sure to be tightly locked in there. It's an all-mountain boot and this year we can find it in all black.

size: 240 / 305 (315 black)

SLS **HEEL LICKER**

STAMINA OUTSOLE **TF** LINER

In the Super Lace Single, one lace is dedicated for tightening the top of the boot and another lace is dedicated to retaining the heel and tightening the base of the boot.

93 carbon grey

HOVER SPIN
70220801

10 black

Hover SPIN is an All mountain boot with a medium flex, it adapts to different terrains; from backcountry to the slopes and even the parks. The unique SPIN system assures a fast and secure closure of the boot, it requires 30% less turns compared to the other wire closure systems. Dyneema cable is the same system used on parachutes, it's also lighter than steel wire and has no memory problem. Try and beat that! TF Liner.

size: 240 / 315

SPIN **CAB3**
LIGHTSTEP OUTSOLE **TF LINER**

The Spin slosure system feature ultra high molecular Polyethylene gives faster response to torsional force. It provides a durable performance at lighter weight, avoiding pressure points. 25% faster compare to other mechanical reel closure systems.

CAB3 is a result of lace webbing directly linked to the tongue, the more you pull the lower lace the more you tighten the tongue to your ankle.

The new Lightstep Outsole is the result of dedicated research and development seeking high-performing materials with a specific weight lower than average sole materials.

TF Liner features injected C in memory latex, exclusive tongue side-cut for a fluid and supportive flex.

FREEDOM SLS NEW MODEL
70230901

21 deep blue

Live free! By reinventing the lacing system this year we have effectively maximised the ease of entry and exit and overall fit of the boot. The Freedom is now really living up to it's name. The Lightstep outsole provides maximum responsiveness on the board keeping weight at a minimum. TF Liner.

size: 240 / 305 (315 black camo)

WOMEN BOOTS

DEVINE HYBRID
70221103

16 black / iridescent

If you're thinking space when you see this boot, you're thinking right! Our Devine this year has a feel for space. Its colorway is just on another planet. The pink and iridescent makes it stand out as our top boot in the women's line. We've added the Hybrid SPIN system and the popcorn outsole. This means that this boot this year is going to be your number one choice. With these new technologies your feet will feel super locked in and the soles will be able to absorb all the shocks. Who wouldn't want a boot like this?

size: 220 / 275

DOMINO HYBRID
70221202

NEW
50 white

Domino Hybrid: Let's start by saying that this boot has changed in many ways. Like the Edge, we know the Domino to be a really great all mountain and freestyle boot. It doesn't let you down, but this year, we added the Hybrid SPIN so to have such a stylish boot and not not have any pressure points. With this new technology, it's one of the best choices even for our PRO team riders. This year in white.

size: 220 / 275

SLS + SPIN

HEEL LICKER

Stamina OUTSOLE

TF LINER

The hybrid system combines the "spin" and "SLS" together for a closure that is quick, affordable and reliable.

The specific lace loop sequence combined with the double anchor points positioned low around the angle means tension produced while tightening the lower boot is prioritised to the Heel Licker system.

The all mountain/freestyle Stamina soles prised of an EVA RP compound that makes the material more elastic and responsive than traditional options. With two grip areas, the Stamina soles are lighter.

TF Liner features injected C in memory latex, exclusive tongue side-cut for a fluid and supportive flex.

Comfortable and manoeuvrable, the Domino SLS has a super snug fit with its heel licker retention system. It's still got the same style as the Domino Hybrid and your foot will feel as comfy as a cushion. The colorway, this year, really tops it making it a perfect fit with any type of binding. It has a medium flex making it a really good boot for any type of rider and any type of terrain.

NORTHWAVE STAMINA SOLE

The all mountain/freestyle Stamina soles prised of an EVA RP compound that makes the material more elastic and responsive than traditional options. With two grip areas, the Stamina soles are lighter.

SLS

The Super Lace Single is a system where a SINGLE lace travels the path through internal channels to tighten the boot. one lace is dedicated for tightening the top of the boot and another lace is dedicated to retaining the heel and tightening the base of the boot. The singular laces run very smoothly within their sheath with barely any friction meaning you can tighten and loosen your boot more effectively. Having two individual locking levers on the outer shell of the boot keep the tongue of the boot cleaner meaning our Power Strap is more compatible.

DOMINO SLS 70221302

Podium. I mean, who doesn't want to stand on it? Well, with these babies you'll surely get on it fast! They're super responsive and really know how to support your heel while keeping the weight of the binding really light. This year we have introduced a new toe strap- the toe wrap making it even comfier than ever. You'll be strapped in so fast your buddies will be struggling to keep up with you. This year you can find it in all black. If you like to hit big jumps, this is definitely the right binding to do so.

size: L / XL

OMNICHROM LIGHT BASE

BIOMAP CARBON HIGHBACK

GRANDMASTER STRAP ANKLE STRAP

EASY-ENTRY SYSTEM

TOE-WRAP STRAP

Reactivity while simultaneously improving flexibility, the Omnichrom Light reduces the overall weight by shaving unnecessary material from the bridge and baseplate.

The Biomap Carbonfiber highback is made from Carbon Fiber manufactured with attention to performance. The asymmetrical design is ergonomically engineered to fit the calf and angle of rider's legs to maximize performance and response.

Grandmaster Strap brings an incomparable and direct power transmission from the ankle to the binding without compromising the comfort.

Eazy-Entry allows to overthrow the ankle strap's connector out of the base in a locked position, guaranteed by the steel spring, to simplify the entrance of the boot into the bindings.

This year we have given our toe strap a revamp. Our new toe wrap strap is made with a double TPU injection which is the same material that is used in skate wheels. This gives the strap way more comfort and a way better grip.

RADAR
71231021

NEW MODEL

42 green forest / white

Let's mix up some colors on the new Radar. This classy as hell binding makes it perfect on any type of board. This binding has been designed for powder hounds and park junkies alike who want a binding that punches back but without compromising any tweakability. Just like the Podium, we can find the new toe wrap and this year we have decided to make it in dark green, black and a tint of orange. It's a high performing binding so expect it to be so when strapping in.

size: L / XL

OMNICHROM LIGHT BASE

COMPOSITE CARBON HIGHBACK

GRANDMASTER STRAP ANKLE STRAP

EASY-ENTRY SYSTEM

TOE-WRAP STRAP

Reactivity while simultaneously improving flexibility, the Omnichrom Light reduces the overall weight by shaving unnecessary material from the bridge and baseplate.

The Biomap is a set of asymmetrical highbacks that provide maximum energy transmission from your body to the board while ensuring proper stance support.

Grandmaster Strap brings an incomparable and direct power transmission from the ankle to the binding without compromising the comfort.

Eazy-Entry allows to overthrow the ankle strap's connector out of the base in a locked position, guaranteed by the steel spring, to simplify the entrance of the boot into the bindings.

This year we have given our toe strap a revamp. Our new toe wrap strap is made with a double TPU injection which is the same material that is used in skate wheels. This gives the strap way more comfort and a way better grip.

LIGHT SABER BASE

The Light Saber is an evolution of the Delta Light base plate. We reduced the contact points to a minimum in order to give you a better feeling while riding while reducing the weight. The heelcup positioning is totally tool-less: 2 different positions are adjustable with two levers located on the baseplate. The new Light Saber base plate gives you the opportunity to adjust the highback independently from the ankle straps, which results in 13 different customizable combinations to suit your riding style. The 3D Basepad comes in two different densities.

TOE-WRAP

This year we have given our toe strap a revamp. Our new toe wrap strap is made with a double TPU injection which is the same material that is used in skate wheels. This gives the strap way more comfort and a way better grip.

A brand new Supersport coming your way! This is definitely a high performing binding which fits really well for freestyle-backcountry orientated riders. This bad boy will take you on some adventurous journeys. It's got a system which allows you to lock and secure the base to the heelcup by having three anchor points. This keeps the heelcup stable and safe. Your heel ain't going anywhere! Strapping in has never been easier with the comfy Grandmaster Strap you'll be sure to have no pressure points and it's got the brand new light toe wrap. This binding is a true keeper.

RELOAD
71221004

NEW
43 green forest / black

The Reload has really stepped it up this year. We've got the Tao Reload being our unisex binding which marries perfectly the Tao of Drake board. It's a genderless love affair which you can choose in three colorways: dirty white and black, pink light blue and white or all black. A huge selection. On the Reload we've updated the baseplate making the system more reliable and stable. It's got the Shovel highback which not only makes it look smoking hot but just gives it that extra flex that you want while riding.

size: S/M - M/L - L/XL

LIGHTSABER BASE

SHOVEL HIGHBACK

CHANGEUP ANKLE STRAP

The new Light Saber base plate gives you the opportunity to adjust the highback independently from the ankle straps and reduced contact points to a minimum in order to give you a better feeling while riding while reducing the weight.

The SHOVEL HIBACK is less concave than the its predecessor giving your ankle all the space it needs to tweek deep into those grabs.

The 'Change Up' strap is an innovative asymmetrical strap that can be swapped or 'changed up' from one binding to the other, allowing you to target the selected area of the boot you want to support.

10 black

NEW
82 ice grey

FIFTY
71221005

NEW
42 green forest / white

The Fifty has been a reliable companion in our company. It has been around for many years, and we can guarantee it is here to stay. What we love most about this binding is that it's really flexible but at the same time very resistant. It's super lightweight which is what you want when wanting to get that natural feel under your feet. Plus, our new Delta Evo baseplate just makes riding so much easier. This binding suits anyone who's into a more freestyle approach of riding.

The Fifty Rusty Toothbrush has the added value of pairing up with our favourite crew, Rusty Toothbrush. You can find it in brown black and with the Rusty Toothbrush logo in white on the highback. Its perfect fit goes with the Battle Rusty, but it mixes well with any park or pow board. The crew has picked this particular binding because of its affordable price point, tweakability and therefore being accessible for everybody.

size: M - L - XL

DELTA EVO BASE

SPADE HIGHBACK

HONEY ANKLE STRAP

A versatile, all-terrain performance baseplate that's fully customizable for superior fit, the Delta Evo is engineered with the highest quality aluminum and fiber reinforced nylon.

The Spade highback is an asymmetrical design to give extra flex to your riding and tweaks featuring a new adjustment system that is both faster to change up and more durable.

The Brand New Honey Strap is a pure injected TPU that is both pliable yet resistant. It is designed to be as lightweight and comfortable as possible. The honey comb design and symmetrical shape means it will mould happily to any boot assuring a secure and comfortable fit.

MEN BOARDS

TEAM
76231096

TEAM WIDE
76231097

This year's graphics of the Team really make it something special. We have decided to give a tribute to Michelangelo's Hands of God and Adam. A masterpiece in the art world, just like our riders number one board. It's our top end board and it is designed to perform well in all types of terrain: it floats perfectly in powder, carves well on piste and doesn't hold back on park features. It's versatile and trustworthy in any type of condition.

size: 153 - 156 - 159 - 160W

DIRECTIONAL TWIN

SMOOTH CLASSIC CAMBER

CARBON RODS SINTRA 8000

Smooth Classic Camber is developed to ensure riders get that stable and secure feel on their board when riding fast or going big. Classic Camber provides the most pop through this classic design.

Carbon Kevlar Rods are a 2d layer of carbon fibre laid into the board, during the pressing process give the board a more responsive yet fluid flex from tip to tail.

The finest P-Tex material is ground together with Nano Carbon particles, and then heated, pressed, and sliced together to offer the fastest base in our collection.

SMOOTH CLASSIC CAMBER

TEAM KOHEI
76231098

Pro rider Kohei Kudo is very well-known also for his artistic talent. He has been designing his pro model board for quite some time and we can surly say that once again, he has succeeded in making this insane graphic. This board shares an identical construction to the TEAM board. A poppy all mountain weapon that will be sure to put a smile on anyone's face.

size: 153 - 156

SMOOTH CLASSIC CAMBER

SQUAD
76231099

SQUAD WIDE
76231100

This year we get a sense of abstract on the Squad. The colors of the board are light but have a tint of black here and there. Its medium flex, blunted directional twin shape is perfect for beginners all the way through to expert riders, hence why it is team rider Dusan Kriz's favourite choice when hitting the streets. This board is super reactive at high speeds but playful and buttery when cruising with friends.

size: 153 - 156 - 159 - 160W

DIRECTIONAL TWIN

MICRO CAMBER

EXTRUDED 4000

The middle section within inserts areas has a 'raised' camber, and on tip and tail there are flat with a bit of rocker sections on the end, both of which provide grip and responsiveness, as well as floating and increased rideability.

The EXT 4000 is comprised of the highest quality P-Tex compound for a high-density base that is lighting fast and tough.

LEAGUE
76231101

LEAGUE WIDE
76231102

If you want a board that has a soft flex with a flat camber but is a directional twin, then this is your board. With its darker tonalities it gives you a skate like vibe. The League is our All mountain entry level board designed for the beginner/intermediate level snowboarder looking to progress every aspect of their riding. It's directional twin which makes it easier to ride switch

size: 148 - 152 - 156 - 159 - 156W - 159W

DIRECTIONAL TWIN

FLAT CAMBER

EXTRUDED 2000

Featuring zero camber between your feet, and rockers on the tip and tail to lift them completely off the snow, super easy to slip and slide, this shape makes the board feel loose, soft, and effortless to press and butter to fuel your park creativity.

Melted P-Tex material forms a very durable base with high abrasion resistance that is long lasting and easy to repair.

DF PRO
76231090

DF PRO WIDE
76231091

Our high-end freestyle model makes performance its priority. If you want to be fast and have insane stability this is your board. A true Twin-Tip built so you can easily perform tricks in regular or switch, this board has been made to fulfill your most performing airs and spins. Its classic camber combined with carbon kevlar rods and high quality hybrid fiberglass provide an uncontested amount of pop whether you are sending it 15ft or 150ft. If you like to lead the race then consider the DF PRO as your head start.

size: 152 - 155 - 158 - 156W

TWIN TIP **CLASSIC CAMBER**

CARBON RODS **SINTRA 8000**

Developed to ensure riders get that stable and secure feel on their board when riding fast or going big. Classic Camber provides the most pop through this classic design.

Carbon Kevlar Rods are a 2d layer of carbon fibre laid into the board, during the pressing process give the board a more responsive yet fluid flex from tip to tail.

The finest P-Tex material is ground together with Nano Carbon particles, and then heated, pressed, and sliced together to offer the fastest base in our collection.

DF
76231094

DF WIDE
76231095

This freestyle park board has got all the right tech in place. It's soft flex makes it great for presses and the double camber profile maintains the pop but allows the board to be maneuverable at low speed. It's the most forgiving board in our collection for learning new tricks. This good looking board is exactly what you need if you are an intermediate to advanced snowboarder looking to take your freestyle riding to the next level.

size: 152 - 155 - 158 - 156W

TWIN TIP **DOUBLE CAMBER**

SINTRA 6000

A combination of both camber and rocker designs. Double Camber boards combine the stable edge contact benefits of camber boards and amazing flotation and flexibility of rockers in a single design. Double Camber boards blends the best qualities of each design to create a more versatile and all encompassing ride.

Melted P-Tex material forms a very durable base with high abrasion resistance that is long lasting and easy to repair.

DF JR
76231111

This year the DF Jr has had a revamp with the use of a new sandwich construction making it very similar to the "Big Boys" DF model. The freestyle groms will be hyped on its true twin shape and double camber profile providing all the tools necessary for pushing their progression. The DF Jr will help pave the way for snowboarding's bright young talents.

size: 120 - 130 - 135

TWIN TIP **DOUBLE CAMBER**

EXTRUDED 2000

A combination of both camber and rocker designs. Double Camber boards combine the stable edge contact benefits of camber boards and amazing flotation and flexibility of rockers in a single design. Double Camber boards blends the best qualities of each design to create a more versatile and all encompassing ride.

Melted P-Tex material forms a very durable base with high abrasion resistance that is long lasting and easy to repair.

BATTLE RUSTY
76231103

Rusty Toothbrush's 4th pro model board. On the base we can find an old dentistry utensil which ties very well with the drawing of a couple of people getting their teeth pulled out. We can still find a catch phrase which is something that the crew has been putting on its board every year. This year it reads "Smile while you can". It's an ode to savoring good times. This board is meant to be ridden with friends, it's meant to make you feel that smile in the moment you strap in and go hit the snow. That's why it's so versatile making it a trustworthy companion in pow and in street and park. She'll be the loyalest member of the crew.

size: 155W - 159W - 163XW

DIRECTIONAL TWIN

SMOOTH CLASSIC CAMBER

CARBON BAR SINTRA 8000

Developed to ensure riders get that stable and secure feel on their board when riding fast or going big. Classic Camber provides the most pop through this classic design.

During the production of the board a groove is CNC'd into the wood core right through the centre from tip to tail and the carbon bar is inserted. As a result the board is much more reactive and poppy but maintains its pressability and torsional flex.

The finest P-Tex material is ground together with Nano Carbon particles, and then heated, pressed, and sliced together to offer the fastest base in our collection.

The tao is known to keep the balance of the universe, it is the ying and the yang maintaining the perfect flow of things. With so many women riding it and so many men loving it, it just came so natural to make a unisex board. The skate camber makes it a super cool jibbing board and the Ur Insane sidewalls absorb vibrations during edge catch. Now also in size 145. The drawings are a creation of the Simpson brothers, Joe and Jake, who have made everyone fall in love with their artistic talent.

76231092
TAO OF DRAKE WIDE
76231093

size: 145 - 148 - 150 - 154 - 154W

TWIN TIP **SKATE CAMBER**

EXTRUDED 4000

Son of the Pow Camber technology, but with more focus on jibbing, the Skate Camber is flat between the bindings, perfect for hitting the rails and sliding boxes. With cambers on the outside of the bindings, you won't lose your pop, and flat again on the nose and tail perfect for presses, which leaves the board very forgiving.

The EXT 4000 is comprised of the highest quality P-Tex com- pound for a high-density base that is lighting fast and tough.

WOMEN BOARDS OVERVIEW

WOMEN BOARDS

DFL PRO
76231107

This year's DFL PRO is dedicated to a woman who's had a real deep impact in history, Joan of Arc. A real legend who once said "I am not afraid, i was born to do this" almost like a perfect mantra for this high performing board. It's got a very fast base and a carbon rod in the middle which gives it a better pop making it PRO team riders Veroniqi Hanssen and Paula Benito's first choice. We've also given it a bit more stiffness which makes it perfect on jumps and its directional twin shape makes it perfect for cruizy carves. A board for more advanced riders. No wonder it's been approved by our slope- style rider Lia-Mara Bosch.

size: 142 - 145 - 148

DIRECTIONAL TWIN

CLASSIC CAMBER

CARBON BAR SINTRA 8000

Developed to ensure riders get that stable and secure feel on their board when riding fast or going big. Classic Camber provides the most pop through this classic design.

During the production of the board a groove is CNC'd into the wood core right through the centre from tip to tail and the carbon bar is inserted. As a result the board is much more reactive and poppy but maintains it's pressability and torsional flex

The finest P-Tex material is ground together with Nano Carbon particles, and then heated, pressed, and sliced together to offer the fastest base in our collection.

CLASSIC CAMBER

DFL
76231108

We haven't changed anything in the DFL as it has been our womens top pick for a while now. It satisfies all the needs of an expert rider in all types of terrain. The Directional Twin shape combined with biax fiberglass and the highest quality sintered base assures for precise turns. Very reactive board with it's Classic camber and the use of Performer woodcore. This board is one trustworthy companion.

size: 145 - 148

CLASSIC CAMBER

SINTRA 8000

Developed to ensure riders get that stable and secure feel on their board when riding fast or going big. Classic Camber provides the most pop through this classic design.

The finest P-Tex material is ground together with Nano Carbon particles, and then heated, pressed, and sliced together to offer the fastest base in our collection.

CLASSIC CAMBER

MISTY
76231109

The perfect board for most park riders. The design has a really cool flair to it. This twin tip, super playful board is what you need to step up your game in the park. Its softer flex and micro camber makes this board forgiving but also really good for presses. A true choice for both chillers and killers. A great choice for women looking to add a freestyle element to their riding.

size: 143 - 147 - 150

TWIN TIP **MICRO CAMBER**

EXTRUDED 4000

The middle section within inserts areas has a 'raised' camber, and on tip and tail there are flat with a bit of rocker sections on the end, both of which provide grip and responsiveness, as well as floating and increased rideability.

The EXT 4000 is comprised of the highest quality P-Tex compound for a high-density base that is lighting fast and tough.

CHARM
76231110

The Charm is our women's all-mountain entry level board designed to make progression fun and easy. It's flat camber profile, soft flex and directional shape offers a light surfy feeling with all the tech you need to make learning those new tricks nice and mellow.

size: 138 - 142 - 147 - 151

DIRECTIONAL TWIN

Double Camber boards blends the best qualities of each design to create a more versatile and all encompassing ride.

Melted P-Tex material forms a very durable base with high abrasion resistance that is long lasting and easy to repair.

TECH & MORE

TIWAG

trenkwalder

PopCorn

The new POPCORN outsole incorporates shock absorption with flair. This low profile outsole brings your feet closer to the board allowing you to practically feel the snow beneath your feet while the reinforced heel piece made from ETPU looks like a bowl of freshly popped corn. It will protect your heels from heavy impacts when you decide to take flight. The extremely grippy HYPERGRIP tread is made from the same rubber as your car's winter tyres, perfect for cruising up icy streets and snowy peaks.

Double Crossbow Vibram

The Double Crossbow system technology is further augmented in the Vibram version, where we add their experience and credibility on outsoles to our unique concepts and construction. Vibram rubber features 30% more grip on ice and slippery surfaces.

Stamina

The new all mountain/freestyle Stamina soles prised of an EVA RP compound that makes the material more elastic and responsive than traditional options. With two grip areas, the Stamina soles are lighter.

Lightstep

The new Lightstep Outsole is the result of dedicated research and development seeking high-performing materials with a specific weight lower than average sole materials.

TF Pro Liner

Our brand new TF PRO liner has updated materials, with double density foam to ensure the perfect fit, which is even better in this last version of our well made liners. Contour Cushion footbed. Women version available.

Counter Cushion

All our insoles are developed to match the Dual Density Northwave liners. The new insole Contour cushion consists on two EVA: one green and one black. The green part, more rigid, maintains the stability of your foot, the black part absorbs the strongest impacts.

TF Liner

Injected C in memory latex, exclusive tongue side-cut for a fluid and supportive flex. Comfort footbed. Women version available.

Comfort

The insole is made with EVA components of different density to provide the best possible level of comfort and power transmission.

Super Lace Single

The Super Lace Single is a system where a SINGLE lace travels the path through internal channels to tighten the boot. one lace is dedicated for tightening the top of the boot and another lace is dedicated to retaining the heel and tightening the base of the boot. The singular laces run very smoothly within their sheath with barely any friction meaning you can tighten and loosen your boot more effectively. Having two individual locking levers on the outer shell of the boot keep the tongue of the boot cleaner meaning our Power Strap is more compatible.

- The Super Lace System has a lace (blue) to close the lower part of the boot and one (red) to close the top.
1. Step one, lower the lever of the SL.
 2. Open the boot with both hands.
 3. Slide into the boot, tighten the inner shoe by pulling his shoelace and by lowering the closure device.
 4. Raise the lever in position stand by.
 5. Pull the EXTERNAL handle to tighten the lower part of the boot.
 6. Pull the INTERNAL handle to tighten the upper part of the boot.
 7. Return levers in the vertical position.

Spin

Ultra high molecular Polyethylene (used on kites, parachutes and bullet-proof jackets) gives faster response to torsional force. It provides a durable performance at lighter weight, avoiding pressure points. Turn the knob to tight the lacing system. 25% faster compare to other mechanical reel closure systems. Tightening the boot requires only 15 turns rather than 20 required by others.

1. Turn the knob to tight the lacing system.
2. Keep pulled forward the puller to open the boot or just release the mechanism.

Hybrid

The hybrid system combines the "spin" and "SLS" together for a closure that is quick, affordable and reliable. The first step when lacing up is to pull on the SLS cable located on side of the boot, pulling on this cable will activate the heel locker retention system and pull the tongue of the boot snug around your ankle locking your foot in place. You can then close the remainder of the boot using the spin system located on the tongue.

Double Spin

"Spin" is a tried and tested technology from Northwave but never before has it been used quite like this. With one dial dedicated to the heel locker retention system you're able to crank on the spin system and generate the power you need to secure your ankle in boot before closing the front of the boot with the second dial. The result is a extremely locked in sensation that is quicker and easier than ever

1. To unlock the Heel Locker 2Spin simply pull its lever once and it is released.
2. Keep pulled forward the puller to open the boot or just release the mechanism.
3. Turn the knobs to tight the lacing system.

Traditional Lace

This closure system needs no explanation. It's where everything started, the most spartan and versatile way to tight your boots.

Heel Locker 2Spin

Our boots equipped with the 'HEEL LOCKER' system offer slightly more ability for the user to achieve that locked in feeling then the 'HEEL LICKER' system. This is because the retention system works exclusively with the external tongue of the boot. This heel retention system is activated using the 'Spin' lacing, the user will notice a superior ability to achieve a micrometrical preferred snugness around the ankle that suits the needs of the user.

Heel Licker SLS

The Brand New 'Heel Licker' is our newest upgrade in providing the best heel retention technology available on the market. The lower boot lace passes the first anchor point then traverses directly into the outer tongue of the boot before returning down to the second anchor, completing it's journey directly after at the locking mechanism. This specific sequence combined with the double anchor points positioned low around the angle means tension produced while tightening the lower boot is prioritised to the Heel Licker system, assuring the best lock of your foot possible. The combination with the new SLS having only one lace to pass through the internal channels means the cord slides easily and therefore can be tightened harder and released quicker.

Biomap Tongue

Brand new Biomap thermoformed asymmetrical Tongue on uppers of all our collection for a versatile flex. Designed and developed to have a perfect match with our liners' collection to provide an incomparable direct feel on power transmission. The new construction assures a fluid flex thanks to one piece construction and a long lasting performance.

Heel Licker Hybrid

Our boots equipped with the 'HEEL LOCKER' system offer slightly more ability for the user to achieve that locked in feeling then the 'HEEL LICKER' system. This is because the retention system works exclusively with the external tongue of the boot. This heel retention system is activated using the 'SLS' lacing, the user will notice a superior ability to achieve a preferred snugness around the ankle that suits the needs of the user.

Cab3

We made our well-known 540 heel retention system last forever, based on the same concept but now working internally. The boot laces are passing through brand new "Super Light" eye-loops, which are 25% lighter and 30% smaller than the previous ones while they keep the same performance, minimizing the friction thanks to their pulleys. This mechanism is a result of lace webbing directly linked to the tongue, the more you pull the lower lace the more you tighten the tongue to your ankle, sticking your heel to the boot with an increased retention and foot stability. Improved this year with a new nylon eye-loop to reduce the lace friction to the minimum.

Flex Window

The ability to create a boot, which is able to flex in a progressive manner required years of research, experience on the snow, and many lab tests. The Flex window enhances comfort and mobility in your foot, and it perfectly represents the balance between power transmission and a progressive flex. The side parts of the collar area slide on the upper-cuff transferring power in a constant way avoiding any possible overlap between materials which could lead to a waste of energy.

Omicrom Light

The Omnicrom on a diet, our light version gives the same proven performance of its predecessor's baseplate, while the heelcup has been enhanced thanks to a lightened bridge. Assuring the same reactivity while simultaneously improving flexibility, the Omnicrom Light reduces the overall weight by shaving unnecessary material from the bridge and baseplate.

Delta Evo

A brand new baseplate have joined the Drake family. Engineered with the highest quality aluminum and fiber reinforced nylon, the ultralight weight Delta Evo baseplate was designed to enhance response and board feel. The weight on this baseplate was dramatically reduced by removing heavy plastic and replacing it with an EVA dampening pad. The Delta Evo has an all new contact pad placed directly on the board to better dampen impacts, and take riding to a whole new level. A versatile, all-terrain performance baseplate that's fully customizable for superior fit.

Natural Cant Plus

The Natural Cant Plus pad sets the new standard for comfort and performance. Its outside angle flushes the gap between the external part of the foot and the binding, providing a perfect feeling of balance and comfort even with the widest stance. It features the Plaxmol Heel cushioning in PU to progressively absorb shocks and vibrations on low and high impact forces. Additionally, the toe ramp delivers perfect side-edge control.

Natural Cant

Customize your riding stance maintaining the natural riding position in order to facilitate the natural inclination of the legs! It features the Rebound heel absorber low density cushioning to increase in the heel area the absorption of the vibrations and the dampening in landings.

Light Saber

The Light Saber is an evolution of the Delta Light base plate. We reduced the contact points to a minimum in order to give you a better feeling while riding while reducing the weight. The heelcup positioning is totally tool-less: 2 different positions are adjustable with two levers located on the baseplate. The new Light Saber base plate gives you the opportunity to adjust the highback independently from the ankle straps, which results in 13 different customizable combinations to suit your riding style. The 3D Basepad comes in two different densities.

Delta

The Delta is the original Drake concept at its purest. With a pre-curved aluminum heel cup directly connected to a nylon/fiberglass baseplate, this baseplate maintains flawless, solid assembly. Designed with the perfect blend of nylon and aluminum for responsiveness and dampening, collectively the construction creates a soft, forgiving baseplate ideal for beginners and freestyle enthusiasts. It is fully customizable, and includes a variety of heelcups and toe ramp adjustments to ensure the perfect fit.

Natural Cant Evo

The Natural Cant Evo has a total new design and it's totally toolless; beside that it features the Rebound heel absorber low density cushioning to increase in the heel area the absorption of the vibrations and the dampening in landings. Thanks to the new Natural Cant Evo pad your riding will feel totally different.

Ultimate Disk

The only disc in the market that allows you to mount on 3 & 4-hole patterns, and channel boards using only 2 screws. Designed to enhance the board's natural feel and provide a Secure mount at the same time. Updated with the Transition Kit, it allows you to mount the Drake bindings on the 2011 CHANNEL.

Biomap carbon Fiber

The Biomap Carbonfiber highback is made from Carbon Fiber manufactured with attention to performance. The asymmetrical design is ergonomically engineered to fit the calf and angle of rider's legs to maximize performance and response from the board, keeping the binding light thanks to its material.

Biomap Composite Carbon

The Biomap is a set of asymmetrical highbacks that provide maximum energy transmission from your body to the board while ensuring proper stance support. That's why our highbacks are designed to be anatomically compatible with every rider's calf, and simultaneously stabilizing your leg in the right position to transmit power directly to the board without wasting any energy. This year we upgrade it thanks to the Carbon Composite material which have performance really close to a sandwich carbon hiback, it means full response.

Shovel

The SHOVEL HIBACK is less concave than the its predecessor giving your ankle all the space it needs to tweek deep into those grabs. It remains relatively rigid through the vertical axis while like the SPADE HIBAK is designed to be flexible laterally, perfect for that forgiving freestyle feel.

Spade

It's fourth year in our collection, the Spade highback is an asymmetrical design to give extra flex to your riding and tweaks featuring a new adjustment system that is both faster to change up and more durable.

Grandmaster strap

This brand new ankle strap brings an incomparable and direct power transmission from the ankle to the binding without compromising the comfort. The important contact area is intercepting every single impulse while the lightness is granted by the differentiated punched zones. Its design is making the contact part overinjected directly on the structural frame fusing together in a unique piece and making the performances long lasting.

Change-Up strap

The 'Change Up' strap is an evolution of the 'Honey Strap' made also from pure TPU it offers a comfortable hug of the ankle while maintaining its power transmission. This innovative asymmetrical strap can be swapped or 'changed up' from one binding to the other, allowing you to target the selected area of the boot you want to support.

Honey strap

The Brand New Honey Strap is a pure injected TPU that is both pliable yet resistant. It is designed to be as lightweight and comfortable as possible. The honey comb design and symmetrical shape means it will mould happily to any boot assuring a secure and comfortable fit.

Toe-Wrap Toe strap

This year we have given our toe strap a revamp. Our new toe wrap strap is made with a double TPU injection which is the same material that is used in skate wheels. This gives the strap way more comfort and a way better grip.

Toe Glove Toe strap

This revolutionary urethane strap ensures perfect fit over the toe of the boot. Its two flexible wings go around the toes, automatically forming a gapless bond between strap and boot, which keeps them secure in the binding. They can also be positioned in their original mode across the front of the toes.

Eazy-Entry

Simplifying the riders' life is a reached goal thanks to this new technology. A mechanical component allows to overthrow the ankle strap's connector out of the base in a locked position, guaranteed by the steel spring, to simplify the entrance of the boot into the bindings baseplate without falling on the board to not bother while riding one foot. Ladder ratchets and toe connector come with a new shape for the same purpose, keeping a clear entrance on the traditional strap closure system to easily place your boot into the binding without the necessity of keeping the straps out with your hands.

MG 12 buckle

The MG 12 is the quickest, and most efficient ratchet in the market, lauded for its ability to slide five ladder steps every crank and its ergonomic shape to fasten the ratcheting and releasing operations. We have reduced the weight by 25% using magnesium instead of aluminum and added even more precision with the new metal button release.

Cambers

Classic Camber

Developed to ensure riders get that stable and secure feel on their board when riding fast or going big. Classic Camber provides the most pop through this classic design.

Double Camber

A combination of both camber and rocker designs. Double Camber boards combine the stable edge contact benefits of camber boards and amazing flotation and flexibility of rockers in a single design. Double Camber boards blends the best qualities of each design to create a more versatile and all encompassing ride.

Flat Camber

Featuring zero camber between your feet, and rockers on the tip and tail to lift them completely off the snow, the Flat boards are horizontally level. Super easy to slip and slide, this shape makes the board feel loose, soft, and effortless to press and butter to fuel your park creativity.

Smooth Classic Camber

Developed to ensure riders get that stable and secure feel on their board when riding fast or going big. Smooth Classic Camber provides the most pop through this classic design.

Skate Camber

Son of the Pow Camber technology, but with more focus on jibbing, the Skate Camber is flat between the bindings, perfect for hitting the rails and sliding boxes. With cambers on the outside of the bindings, you won't lose your pop, and flat again on the nose and tail perfect for presses, which leaves the board very forgiving.

Micro Camber

The middle section within inserts areas has a 'raised' camber, and on tip and tail there are flat with a bit of rocker sections on the end, both of which provide grip and responsiveness, as well as floating and increased rideability.

Cores

Performer

The Performer core features top quality Aspen wood that gives boards a light and flexible feel while remaining responsive and sturdy. This strong durable core ensures agile responsiveness in all conditions.

Premium Pop

The Premium Pop core is made from the finest quality poplar wood. Homogenously distributed throughout the board, its low density is created by narrow veining that gives the board a unique feel. The core transmits energy continuously from the tip to the tail, giving the rider a feeling of being glued to the board. It is designed for all terrain boards with freestyle aspects.

Lightweight Pop

From tip to tail, the Lightweight Pop core is constructed from light poplar wood. It has the same features as the Super Pop with less weight for higher ollies.

Super Pop

A tip to tail layer of pure solid poplar wood is the soul of the Super Pop core, which is lively, powerful, solid, and extremely durable.

Bases

Sintra 8000

The finest P-Tex material is ground together with Nano Carbon particles, and then heated, pressed, and sliced together to offer the fastest base in our collection, the Sintra 8000. Nano additives hold heat, and then discharge to break surface tension of the snow and reduce friction.

Sintra 6000

Comprised of the highest quality P-Tex material, the Sintra 6000 base adds extra durability and speed over baseline models to deliver an extra push to your dynamic and progressive riding.

Extruded 4000

The EXT 4000 is comprised of the highest quality P-Tex com- pound for a high-density base that is lighting fast and tough.

Extruded 2000

Melted P-Tex material forms a very durable base with high abrasion resistance that is long lasting and easy to repair.

Plus

Carbon Kevlar Rods

This 2d layer of carbon fibre is laid into the board during the pressing process give the board a more responsive yet fluid flex from tip to tail.

Carbon Bar

During the production of the board a groove is CNC'd into the wood core right through the centre from tip to tail and the carbon bar is inserted. As a result the board is much more reactive and poppy but maintains its pressability and torsional flex

UR INSANE Sidewalls

This new feature on our boards makes riding even more enjoyable. made from the same material as skateboard wheels (urethane) it has the ability to really absorb every type of impact on the hill, at high speeds it soaks up all that edge chatter and makes hitting park or street features all that more cosy while increasing overall durability and longevity of your board.

Fiberglass

Hybrid

Triax on top and Biax on bottom, the Hybrid strategically combines both to ensure freestyle versatility and carve control with improved edge hold, and an extra poppy tip

Biax

The Biax has glass fibers that are positioned at 90° off-axis to transmit soft torsional stiffness for an easy carving ride.

| 49 | 15 | | 315 |

STEP 1 Lenght measurement

- Place a piece of paper on the floor, against the wall.
- Wear the socks you use for riding
- Step on the paper with your heel touching the wall behind.
- Mark the longest toe on the paper (make sure do not move the heel from the wall or ask someone to help you) so measure from the wall to the marking.

Do the same operation above for both feet and write down the longest measure.

STEP 2 Size chart

- Now that you know your feet lenght, look at the size chart to get the right size.
- If your measure stay between the chart measures we suggest **HALF SIZE MORE.**
